Figure 1. Schematic representation of the experimental design. The figure shows the sequence of events for each trial. The participant is first presented with a target stimulus (a red dot) and then a starting stimulus (a green dot). The participant then moves the hand to the starting position and waits for the starting signal (a green light). When the starting signal is given, the participant moves the hand to the target position. The time taken for the hand to move from the starting position to the target position is the reaction time (RT). The time taken for the hand to move from the target position back to the starting position is the return time (RT_{return}). The total time taken for the hand to move from the starting position to the target position and back to the starting position is the total time (RT + RT_{return}).
